# EcoMotive

Intelligent Decisions for your Fleet

EcoMotive designs and develops robust telematics hardware for different types and sizes of vehicles.

It captures and provides real time information about vehicle and driver activities through GSM/GPRS network using GPS positioning. Our web based software application processes, analyzes and filters the collected data into a complete overview with events and warnings; it enables correct and informed decisions even with limited monitoring resources.

SERVICES

Monitoring services;
Connectivity with 3rd parties;
Customization of reports and business logic;
Set-up/Installation/Service;
Stand-alone installation;
Custom sensors.

MISSION

Fleet management and tracking.
Event analysis, handling and notification.

hardware

- ☑ GPS localization
- ☑ Digital tachograph download
- ☑ Fuel Monitoring
- ☑ FMS&CAN support
- ☑ GPRS and Wireless communication
- ☑ Driver Identification
- ☑ Custom sensors
- ☑ Communication

software

- ☑ Web based
- ☑ Real time tracking
- ☑ Fuel based events
- ☑ Reports
- ☑ Charts
- ☑ Geofencing
- ☑ Fleet management
- ☑ Events and notifications

FOMCO
optimizing your speed

We fully realize that any product needs support, connectivity and extensibility. As a result we are completing our product with the following services:

Custom sensors can be connected to the hardware and their readings integrated in the reports.
Connectivity to third-party systems: the cost components identified by the solution can be exported to your accounting and resource management software.
Customization of reports and business logic: our solution can be customized to collect data and generate the reports based on custom metrics.
Monitoring services: if your current personnel cannot perform the live monitoring of the data inflow, we can assist with identifying the events and help you make an informed decision.

Set-up/Installation/Service: Our network of experienced partners will install, configure and service the tracking devices on your vehicles.
Stand-alone installation: the server collecting the tracking data can be installed on a server machine located on your premises.

TOP features

1 Web-based: easy access from any computer, any time through a web-browser

2 Real-time tracking: know the current position and status of any of your vehicles

3 Remote Tachograph Downloads: mandatory downloads are done automatically from digital tachographs

4 Reports: predefined events, consumption and other measurement statistics

5 Custom events: the system will provide you relevant notifications for you

6 Fleet management: you can receive notifications regarding specific readings of your vehicles and drivers
